

I'm a full-stack software engineer with 5+ years of professional experience contributing to production SaaS systems built with TypeScript, React, and Node.js. I've worked on backend services, APIs, and integrations that support complex customer workflows, collaborating closely with product and engineering partners in small, fast-moving teams. My background in scientific computing informs a disciplined approach to data handling, testing, and reliable system behaviour.

Skills

- Languages: TypeScript, JavaScript, Python
- Web: React, Next.js, Node.js, REST, tRPC, Prisma
- Data & Cloud: MySQL, MongoDB, Planetscale, AWS
- Practices: Agentic Development, System Design, API Design, Data Visualization, LLM Integration

Experience

Owner / Software Engineer	Fine Day Technologies Hubbards, NS (remote)	2023–Present
• Serve as lead/core engineer for early-stage startups and SMBs, owning technical design and end-to-end implementation of full-stack web applications • Advise founders on technical tradeoffs, system design, and scalability while delivering production-ready solutions • Maintain a long-term engagement with a YC-backed SaaS company as a core platform engineer (see below)		
Software Engineer	BiggerPicture San Diego, CA (remote)	2022–Present
• Core engineer on a YC (S22) SaaS logistics platform, contributing to a from-scratch rewrite that now supports 60,000+ monthly dock door appointments • Owned development of critical API surfaces and third-party integrations, reducing customer scheduling times by over 10x • Worked closely with the CEO, CTO, and clients to evolve the platform's architecture, performance, and reliability		
Senior Software Developer	Luna Sea Solutions Lunenburg, NS (hybrid)	2021–2022
• Led development of a full-stack SaaS product at an ocean tech startup, turning academic tools into widely used products for mariners and the local surf community • Designed and built a cloud-hosted processing pipeline for real-time and forecast data, handling hundreds of GBs of daily throughput • Built GPU-accelerated WebGL visualizations for ocean currents, wind, and waves		
Software Developer	Luna Sea Solutions Lunenburg, NS (hybrid)	2020–2021
• Early technical lead responsible for converting internal MATLAB and Python research tools into commercial-grade software • Authored an industry-leading report advising on the use of software tools in the ocean energy sector		
Doctoral Researcher	Ocean Acoustics Laboratory Dalhousie University, Halifax, NS (on-site)	2013–2020
• Built custom Python software for large-scale data analysis, signal processing, and visualization • Presented complex technical work to academic and industry audiences		

Education

- **Ph.D. Physical Oceanography**, Dalhousie University, Nova Scotia. **2013–2020**
- **B.Sc. Mathematics**, Dalhousie University, Nova Scotia. **2008–2013**
